Good morning,

The Cayuse has just finished retrieving a 3-point composite surface sediment sample for target site B479- Alt 1 (near RM 16.7/Sellwood Bridge). The composite sample consists of very dark gray silt with trace fine sands and trace woody debris. Four attempts total were made at the location, using attempts 2, 3, and 4 for the composite sample. The vessel is heading to proposed location B431 (RM 12.1) to sample next. Included are photos of the sample site location and composite sample contents

Jonni
